MINISTÈRE DE L'AGRICULTURE DE L'AGROALIMENTAIRE ET DE LA FORÊT

Objectives

- Guarantee the traceability of meat inspection results
- Improve food chain information (FCI) circulation
- Automatically produce the mandatory condemnation reports for cattle owners
- Increase meat inspection data availability for epidemiological purposes, risk-based inspections on farm etc.

Data collection

- Mandatory since 1st January 2015 in all French cattle slaughterhouses (n=263)
- Web application : easier to update, easier for national data collection
- Database independent from food business operator
- National list of reasons for condemnation and condemnation portions

Animal characteristics

Decision report edition

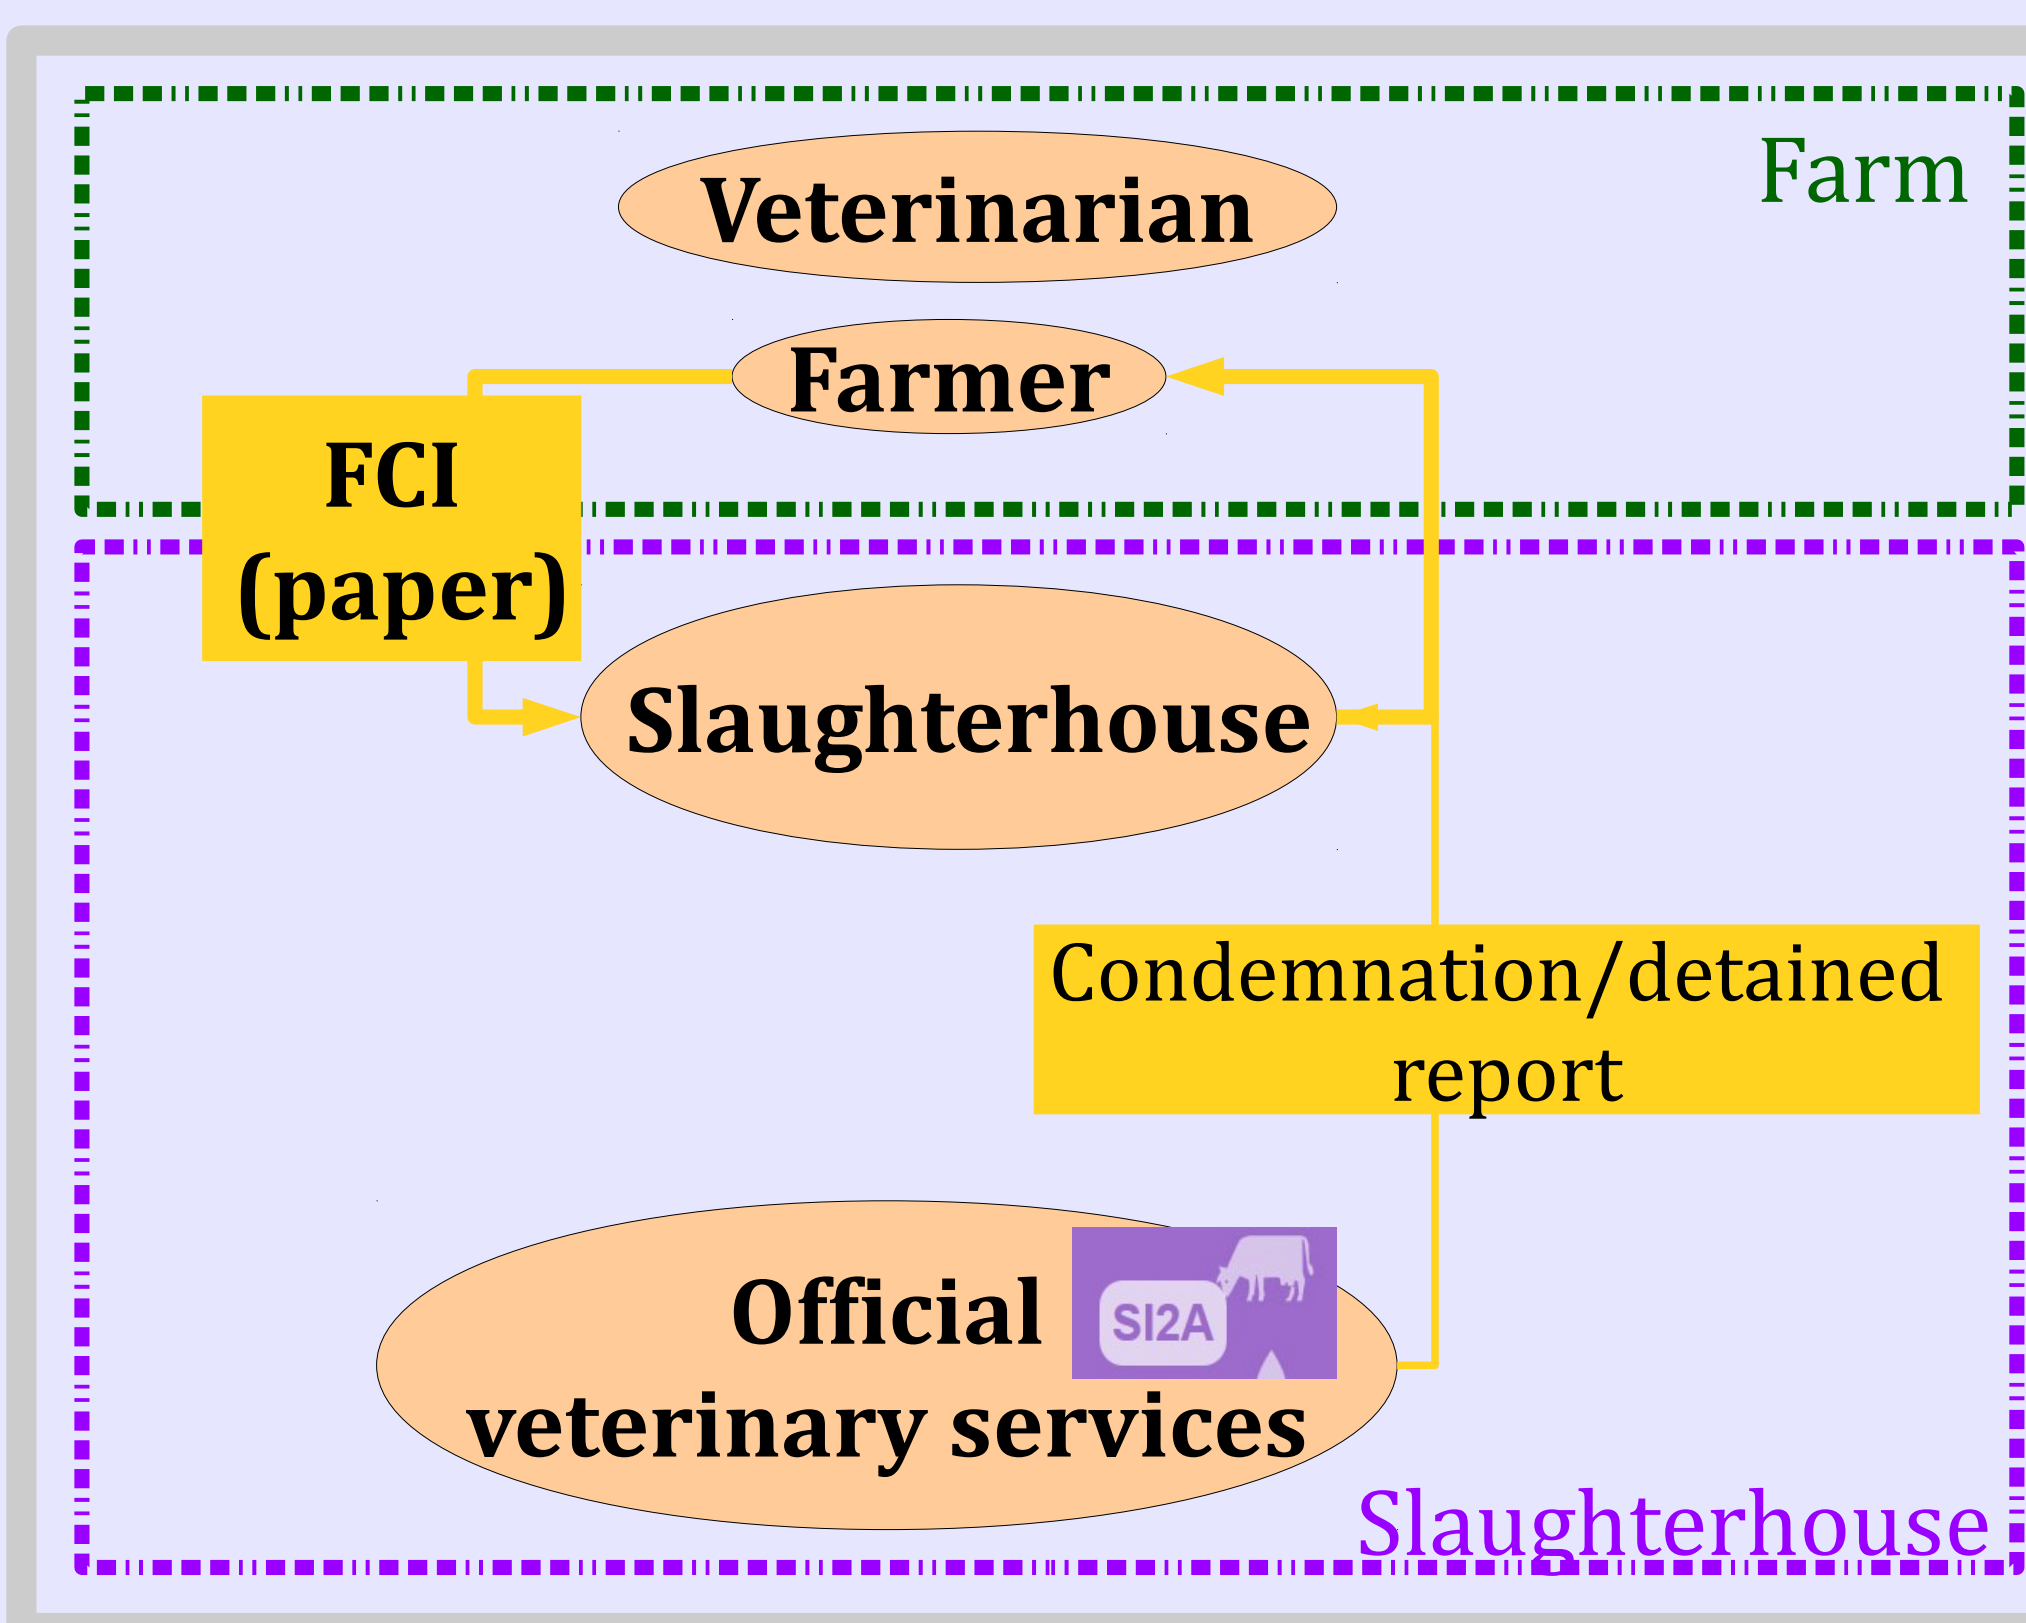

Post-mortem inspection (PMI)

- PMI1 : Detained portions or carcass
- PMI2 : condemned portions or carcass

Edition of mandatory condemnation/detained report

DEDAL : statistical report edition

- Users can access to tables with aggregated data at several levels (slaughterhouse, region, national)
- Possibility to build its own queries and reports with tables and graphs

Food chain information circulation :

- From farm to slaughterhouse
- From slaughterhouse to farm

Perspectives

- Implementation of SI2A V2 to allow registration of meat inspection data directly on the slaughter line
 - A necessity for swine and sheep/goat slaughterhouses (high slaughter line speed)
 - An improvement for offal condemnation information registration
- Edition of data quality reports to guarantee a high data quality level
- Edition of new statistical reports with epidemiological indicators
