Introduction & Objective

Indicator of ANIMAL
HEALTH and WELFARE
ECONOMIC consequences to
farmers

UNASSISTED
DEATH
&
EUTHANASIA

Describe beef cattle mortality in Estonia

AIMS

Identify causes of death and euthanasia

Identify animal cohorts with high/low risk

Materials & Methods

RISK FACTORS

Estonian Agricultural Registers and
Information Board
78,605 animals from 1,321 herds

CAUSES

Estonian Livestock Performance Recording Ltd

Causes identified for 230 cows, 501 heifers, 473 steers

Results

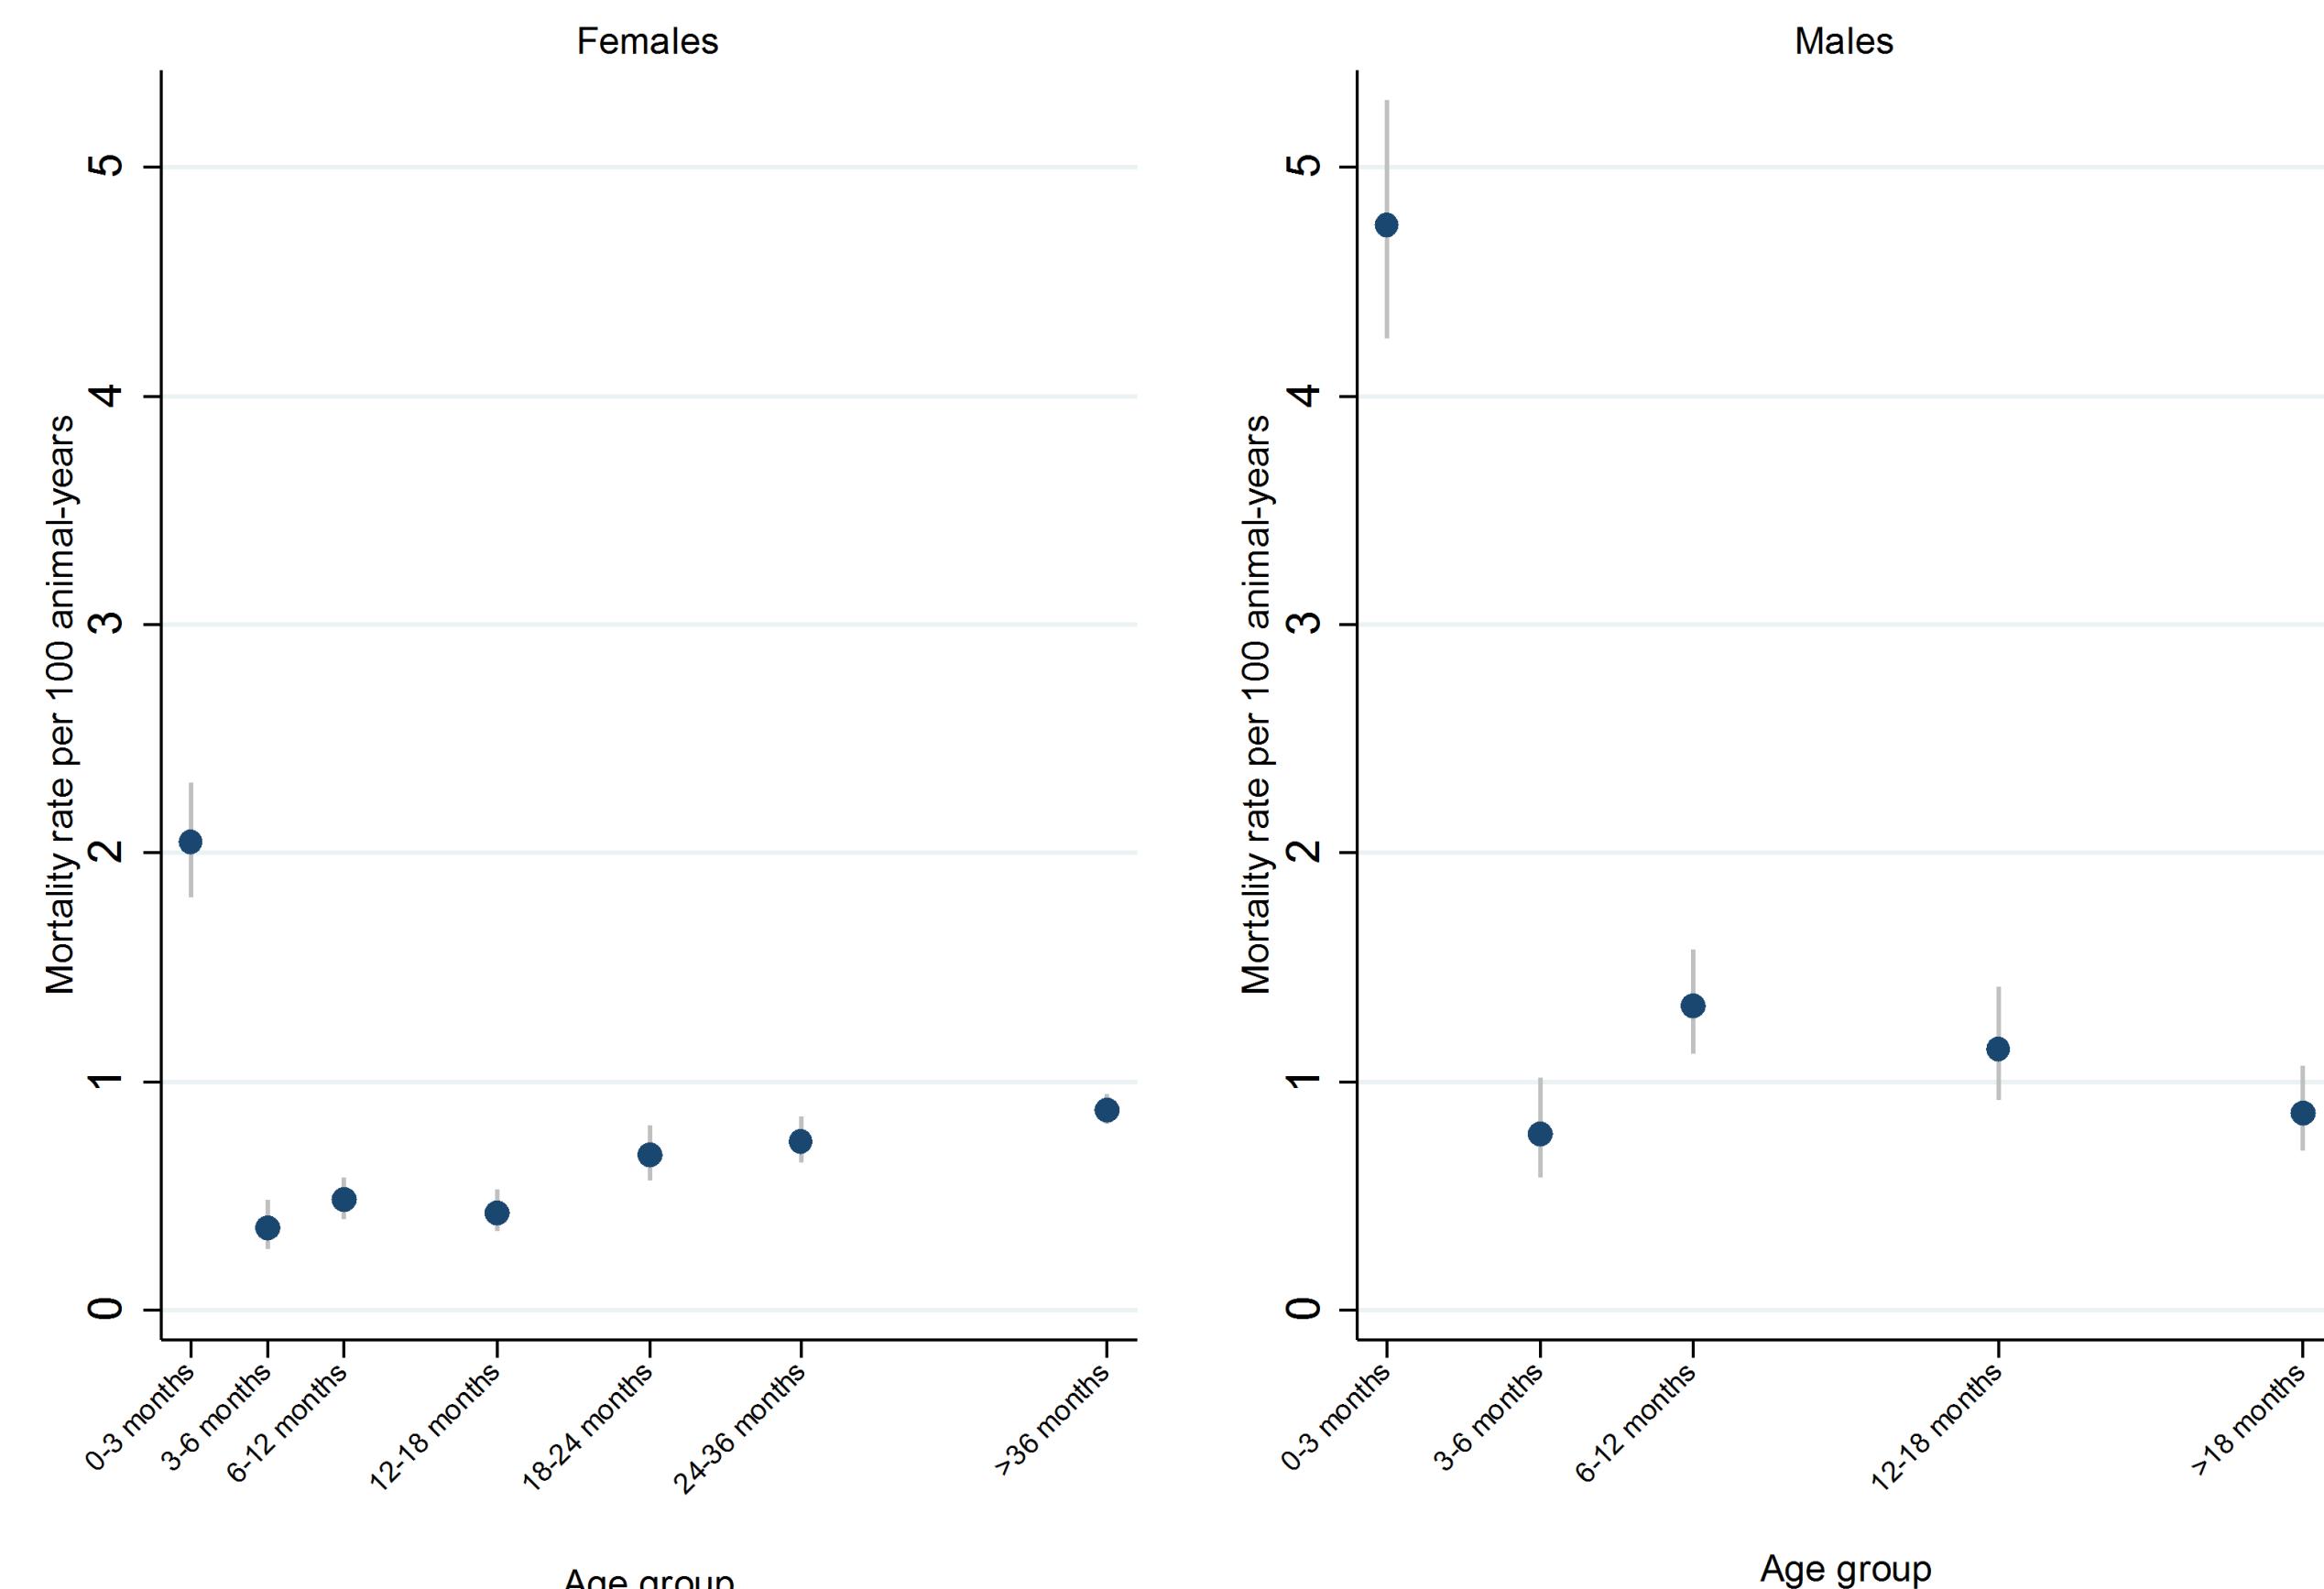

Main causes of death and euthanasia

COWS

1. Other/unknown reasons (29.1%)
2. Trauma and accident (28.1%)
3. Metabolic & digestive disorders (20.3%)

Mortality (on-farm death and euthanasia) rate estimates in female and male cattle by age group in 2013 and 2014

HEIFERS

1. Trauma and accident (30.3%)
2. Metabolic & digestive disorders (28.3%)
3. Other/unknown reasons (25.0%)

STEERS

1. Metabolic & digestive disorders (30.2%)
2. Trauma and accident (28.8%)
3. Other/unknown reasons (20.3%)

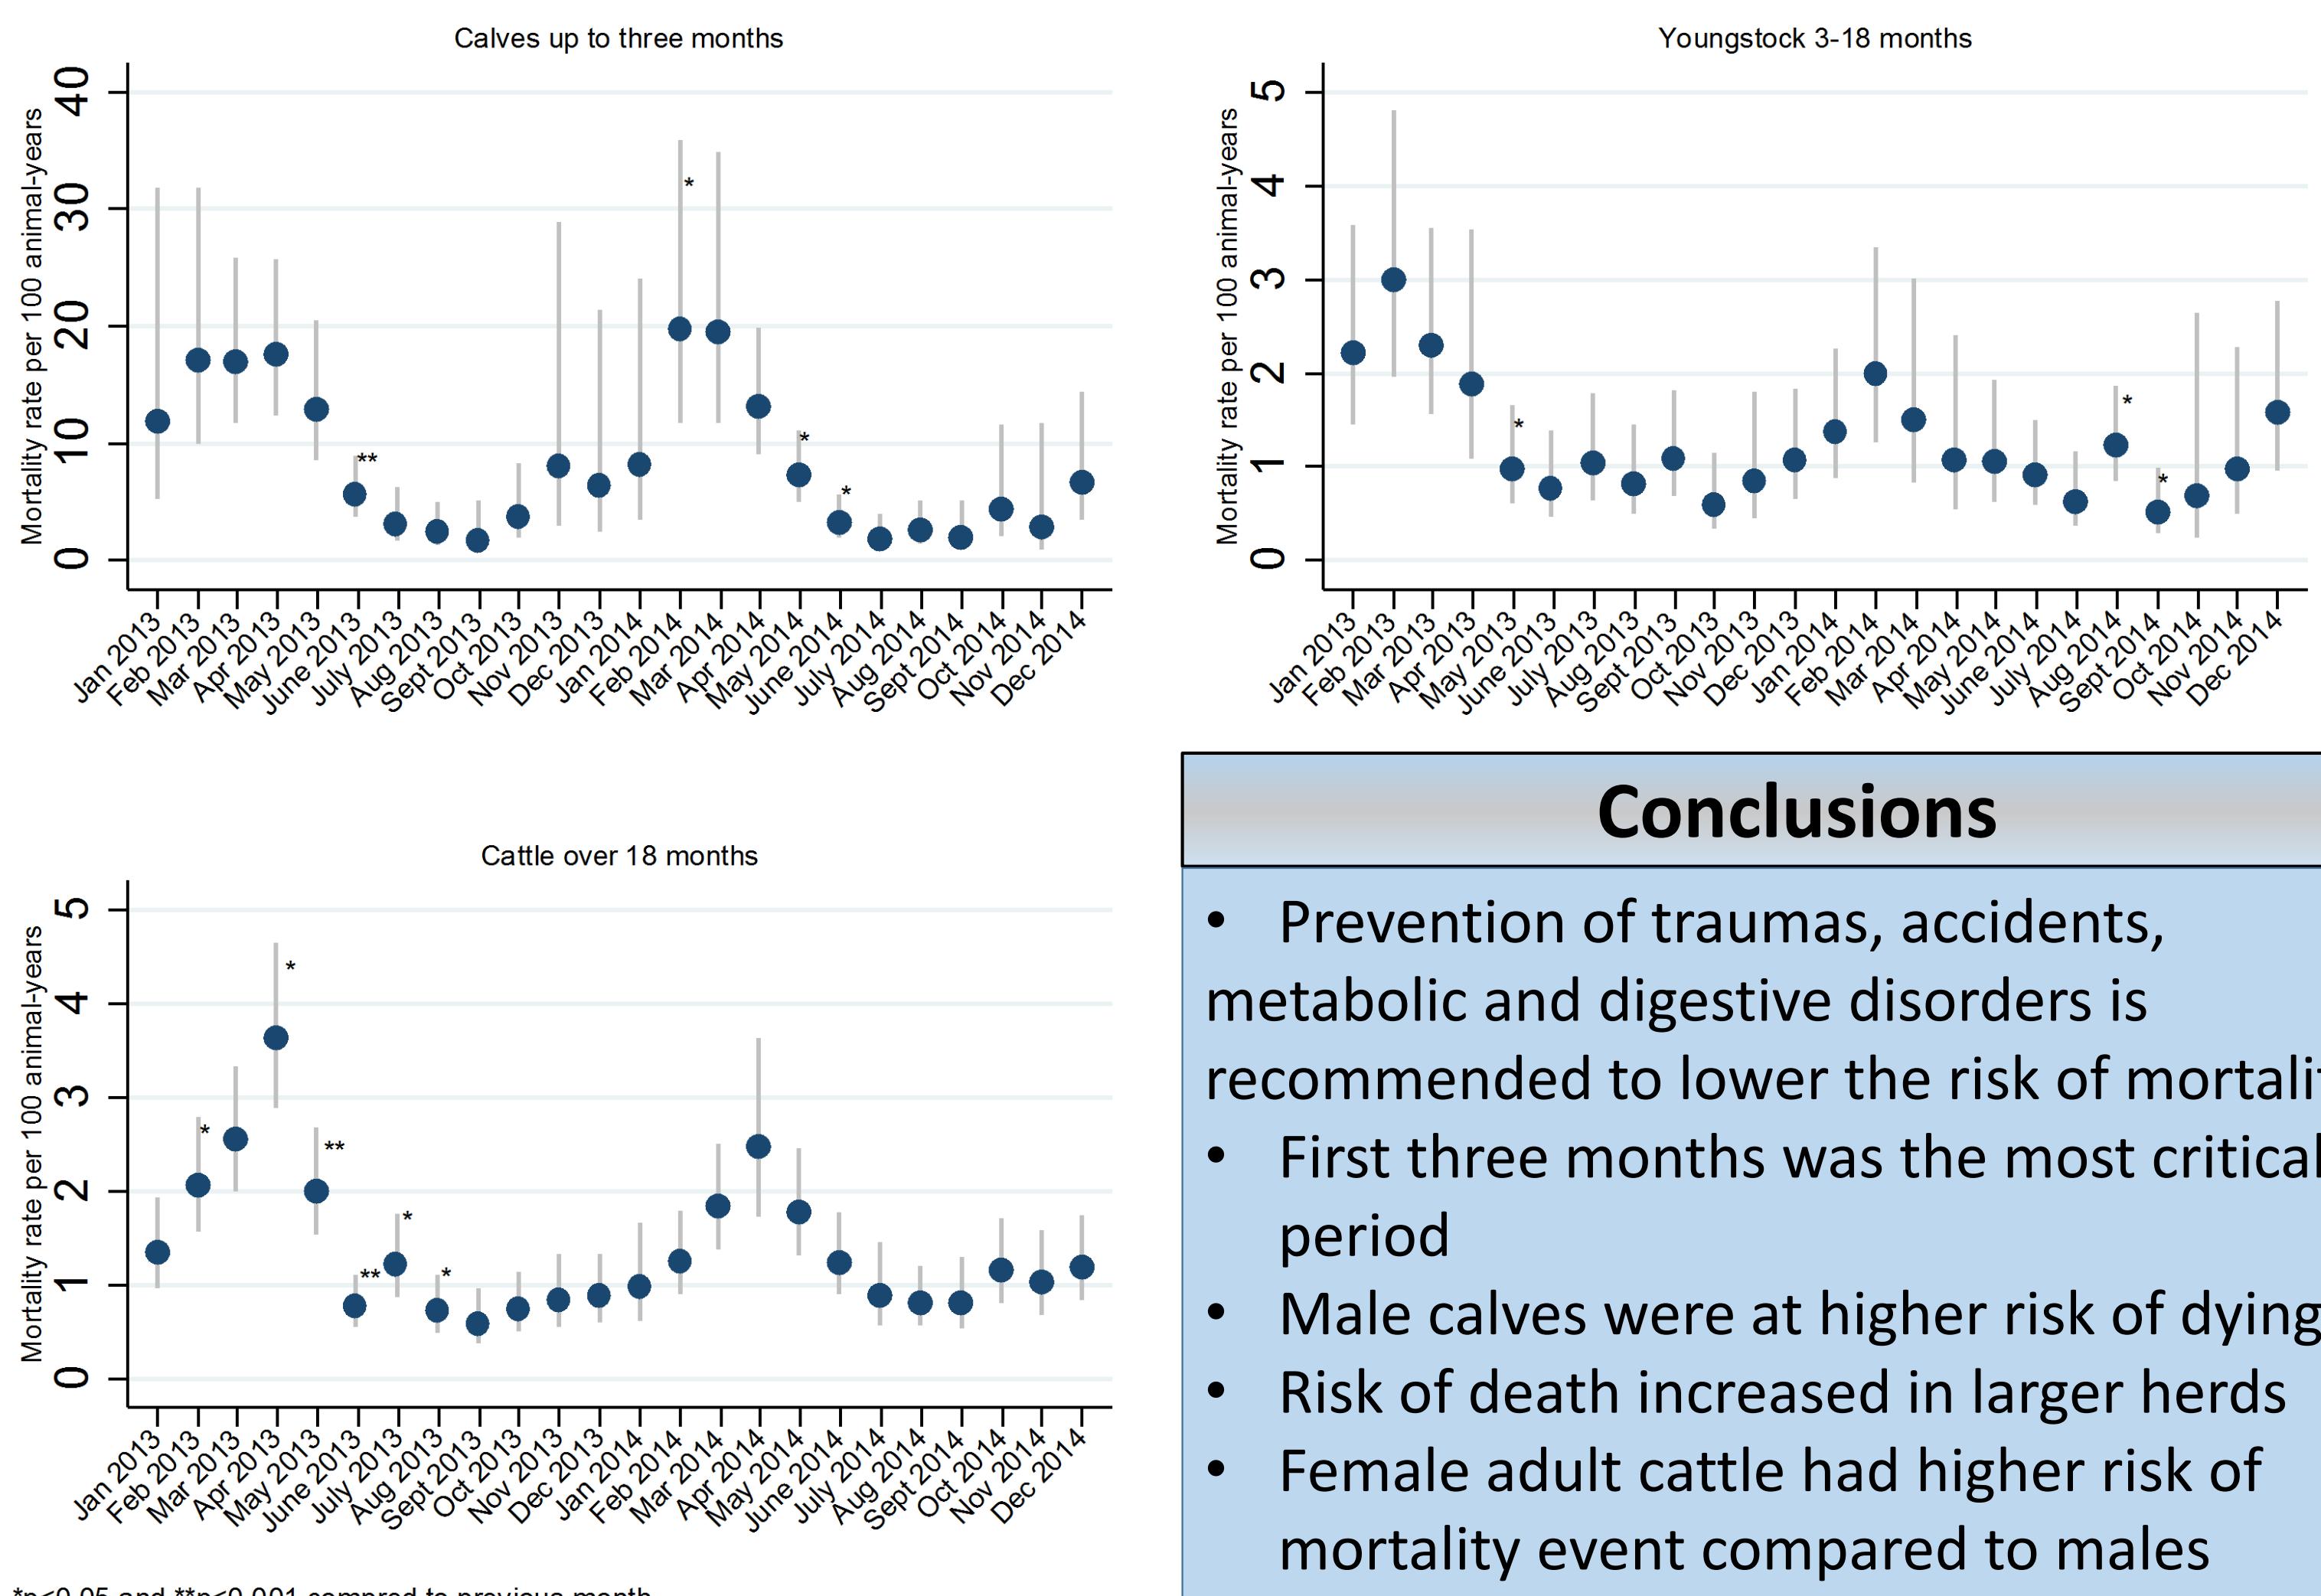

Table 3. Risk factors for on-farm beef cattle (over 18 months) mortality including euthanasia in Weibull proportional hazard random effect model evaluated in 49,950 cattle from 1,214 herds

Variable	Category	n ^a (%)	HR	95% CI	P-value	Wald test P-value
Age category ^b	18-24 months	28,469 (37.05)	1			0.019
	24-36 months	21,624 (28.14)	1.20	0.97; 1.47	0.088

^aNumber of animals in each category

^bNumber of observations in each category after splitting the observations according to age categories

Seasonal distribution of mortality (on-farm death and euthanasia) rate in years 2013 and 2014

Conclusions

- Prevention of traumas, accidents, metabolic and digestive disorders is recommended to lower the risk of mortality
- First three months was the most critical period
- Male calves were at higher risk of dying
- Risk of death increased in larger herds
- Female adult cattle had higher risk of mortality event compared to males
- Scottish Highland breed adult cattle experienced lowest risk of mortality
- Calving season shared increased mortality risk for all age groups

ACKNOWLEDGEMENTS

Authors are grateful for The Estonian Agricultural Registers and Information Board and Estonian Livestock Performance Recording Ltd for data inquiry
